AGENDA ITEMS		PRESENTER
Predictive Services Update: Breezy, Warmer and Drier Today... Warming and drying trend continues today...with near normal levels for early September. Dry west/southwest flow returns to the Great Basin and there is a concern that SW winds of 15-25 mph could affect our current large fires in Idaho by this afternoon. Winds should increase to 15-30 mph (with locally higher gusts) Wednesday but humidity should be coming up about 5-10% from this afternoons levels. These increasing SW winds are due to another low dropping in from the Pacific NW. By late Wednesday it should bring clouds to our western areas, then occasional showers and isolated wet thunderstorms Thu-Sat. Lingering cool conditions thru the end of this coming weekend.		Predictive Services
